Summary

DevOps Engineer with 3 years of hands-on experience automating cloud infrastructure, CI/CD pipelines, and deployment workflows across AWS and Azure. Expert in Infrastructure as Code (Terraform), Configuration Management (Ansible), Container Orchestration (Kubernetes, Docker), and Release Engineering. Delivered scalable, highly available microservices architectures, achieving 90% reduction in manual deployment effort. Specialized in building production-grade CI/CD pipelines, implementing observability solutions (Prometheus, Grafana), and managing Kubernetes clusters (EKS, AKS).

Work Experience

DevOps Engineer 1

Sep 2024 – Present

Techdome Pvt Ltd, Indore

- Architected and launched 8+ production-grade projects using Infrastructure as Code (Terraform) and Configuration Management (Ansible) across AWS and Azure platforms, maintaining full ownership of CI/CD automation, deployment, and monitoring.
- Engineered multi-environment CI/CD pipelines (DEV/UAT/PROD) using GitHub Actions, automating containerized deployments to Kubernetes clusters with 95% success rate and enabling 50+ deployments per month with zero-downtime releases.
- Reduced infrastructure provisioning time by 90% through Terraform modules and Ansible playbooks, eliminating configuration drift and ensuring consistency across 15+ environments.
- Managed and streamlined Kubernetes clusters (AKS/EKS), including namespace isolation, NGINX Ingress Controllers, Horizontal Pod Autoscaling (HPA), resource quotas, and workload optimization for 20+ microservices.
- Established a comprehensive observability stack using Prometheus and Grafana with custom exporters for APIs, Kafka, MongoDB, and Kubernetes metrics, reducing MTTR by 60%.
- Orchestrated Docker containerization strategies implementing multi-stage builds and optimizing image sizes by 40%, while introducing GitOps workflows and release engineering practices.

Junior Engineer

Jul 2023 – Sep 2024

KocharTech, Amritsar

- Provisioned and configured Linux servers (Ubuntu, RHEL), databases (PostgreSQL, MySQL), and cloud networking (VPCs, security groups, subnets), improving system performance by 40%.
- Built centralized log management and rotation strategies for distributed systems, reducing storage costs by 30% and accelerating troubleshooting efficiency.
- Refined CI/CD pipelines using GitHub Actions and Docker, reducing release cycles by 30%, increasing deployment frequency by 25%, and cutting manual configuration errors by 85%.
- Enhanced PostgreSQL database scalability by 20% through Docker Compose orchestration with connection pooling and query optimization.
- Designed cloud infrastructure solutions on AWS and Azure, meeting security, scalability, and high availability requirements with 95% client satisfaction rate.

Projects

- **Multi-Cloud VM Image Baking (Packer):** Automated production VM image builds across AWS, Azure, and DigitalOcean using HashiCorp Packer, provisioning a full microservices stack with security hardening and systemd services — eliminating manual server setup.
- **Keyless EC2 Deployment Pipeline (SSM + GitHub Actions):** Eliminated SSH access from production EC2 deployments by implementing AWS SSM RunCommand with IAM role-based auth, enabling fully automated, zero-open-port CI/CD pipelines via GitHub Actions.
- **Ansible HTTPD Optimization:** Resolved HTTPD service idempotency challenges in Ansible playbooks by implementing conditional task execution and handlers, optimizing resource consumption by 40% and improving configuration reliability.

Education

Degree	Institution	Year	Grade
B.Tech (Computer Science & Engineering)	Oriental Inst. of Sci. & Tech	2019–2023	8.29 CGPA

Skills

- **DevOps & Automation:** CI/CD Pipelines, GitHub Actions, Release Engineering, Deployment Automation, GitOps, Infrastructure Automation
- **Cloud Platforms:** AWS (EC2, S3, VPC, IAM, EKS, RDS, CloudWatch, Route53, ELB), Azure (AKS, ACR, VNet, Azure DevOps), GCP (Basics)
- **Infrastructure as Code:** Terraform, Ansible, CloudFormation (Basics)
- **Containers & Orchestration:** Docker, Kubernetes, Amazon EKS, Azure AKS, Helm, NGINX Ingress, Microservices Architecture
- **Monitoring & Observability:** Prometheus, Grafana, CloudWatch, Log Management, APM, Alerting, Metrics Collection
- **Operating Systems & Scripting:** Linux/Unix (RHEL8, CentOS, Ubuntu), Shell Scripting (Bash), Python
- **Networking & Security:** VPC, Security Groups, Network ACLs, Load Balancing (HAProxy, ALB, NLB), SSL/TLS, Cloud Security
- **Databases:** PostgreSQL, MySQL, MongoDB, Database Automation
- **Version Control:** Git, GitHub
- **Additional Tools:** Kafka, Elasticsearch, Docker Compose, YAML, JSON
